

FIF-10A USB PROGRAMMING INTERFACE

The **FIF-10A** is the Interface Unit which allows cloning of channel data to Vertex Standard transceivers,* and/or re-writing of the firmware on some Vertex Standard transceivers,* using the USB port of a personal computer.

*: Check with your Vertex Standard Dealer for applicable models.

OPERATING SYSTEM REQUIREMENTS

Microsoft® Windows® 2000, Windows® XP (32 bit Ver. only), Windows® Vista (32 / 64 bit Ver.), or Windows® 7 (32 / 64 bit Ver.)

PACKING LIST

FIF-10A Interface Unit
 USB Cable
 CD-ROM (Includes the Driver File and Operating Manual)

OPERATION

- ❑ **Log on to the computer using the “Administrator” account.** If you do not know how to change the account to “Administrator,” please consult your computer system administrator.
- ❑ Connect the supplied USB Cable between the **FIF-10A** and your computer, then connect the appropriate Connection Cable (option) between the **FIF-10A** and the transceiver.
- ❑ When turning on your computer for the time after connecting the **FIF-10A** to your computer, the computer will ask for the **FIF-10A** driver. Please see page 2 through 7 regarding driver installation.

Confirm the computer’s communication port which detects the **FIF-10A**. Describe details on the page 8 through 11.

- ❑ Execute the cloning/writing software.
 If this is the first time you have executed the programming/writing software on this computer after installing the **FIF-10A** USB Interface, check the programming/writing software’s “CONFIGURE” parameter, to be sure that the communication port of the programming/writing software matches that set for the **FIF-10A**. See page 12 through 14 for details.

Note: When the DC power from the USB Bus is insufficient, connect the **NC-85** or any regulated DC power supply (6 V, 1 A) to the DC power jack of the **FIF-10A**. Be sure to use the correct polarity when connecting the regulated DC power supply; **the center pin of the power jack is positive (+)**.

OPTIONS

- CT-104A** Connection Cable with 8-pin Modular Jack (for the **VX-2100/-2200/-4100/-4200, VXR-9000** etc.)
- CT-105** Connection Cable with 14-pin Universal Connector (for the **VX-600/-800/-900** etc.)
- CT-106** Connection Cable 4-conductor Mini-phone Jack (for the **VX-160/-180/-230/-350/-410/-420** etc.)
- CT-108** Connection Cable with 14-pin Universal Connector (for the **VX-820/-920** etc.)
- NC-85** AC Adapter

NOTE

The **FIF-10A** is designed to be connected directly to the computer’s USB port. Devices that are made to convert a USB device to a 9 pin serial port will not work and/or may damage the **FIF-10A**.

Connect the Transceiver to this jack using the appropriate (optional) Connection Cable.

Status Indicator
 GREEN: Normal Condition
 RED: Uploading/Downloading
 ORANGE: Firmware Writing

This DC power jack supplements the DC power of the USB port. Connect the **NC-85** or any regulated DC power supply (6 V, 1 A) to this jack when the DC power from the USB Bus is insufficient. **The center pin of the power jack is positive (+).**

Connect your Computer to this jack using the supplied USB Cable.

Note: When using the **FIF-10A**, please make sure the computer is equipped with an Intel or Via chipset (not AMD, SiS and ALi).

TYPICAL SETUP FOR THE FIF-10A

INSTALLATION PROCEDURE FOR THE FIF-10A DRIVER (Microsoft® Windows® 2000)

Note: Please perform this operation after changing user account to an “Administrator”.

1. Set the supplied CD into your CD-ROM drive.
2. When FIF-10/A is connected to the USB port on the computer, the following window (Found New Hardware Wizard) will be open. Click the left mouse button on “Next >” button.

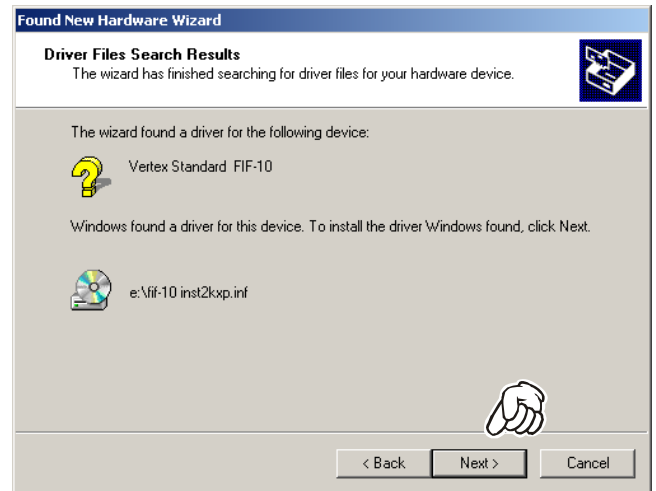

3. Select “Search for a suitable driver for my device,” then click the left mouse button on the “Next >” button.

4. Select “CD-ROM drives,” then click the left mouse button on the “Next >” button.

5. Click the left mouse button on the “Next >” button.

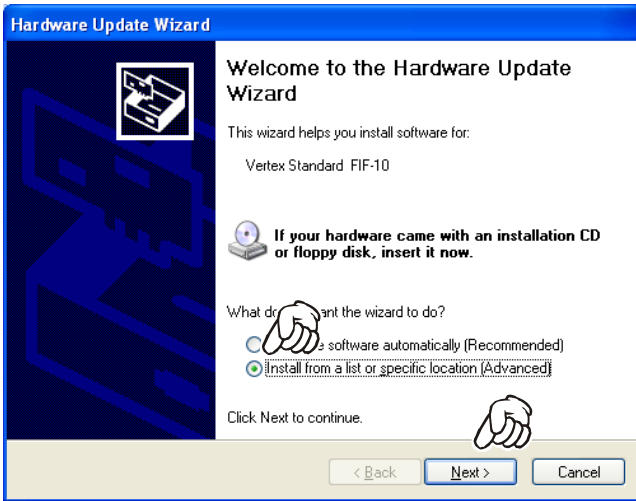

6. Click the left mouse button on the “Finish” button.

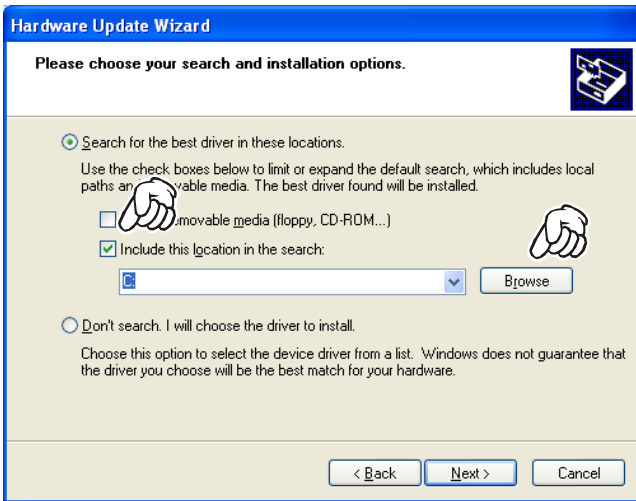

INSTALLATION PROCEDURE FOR THE FIF-10A DRIVER (Microsoft® Windows® XP)

Note: Please perform this operation after changing user account to an “Administrator”.

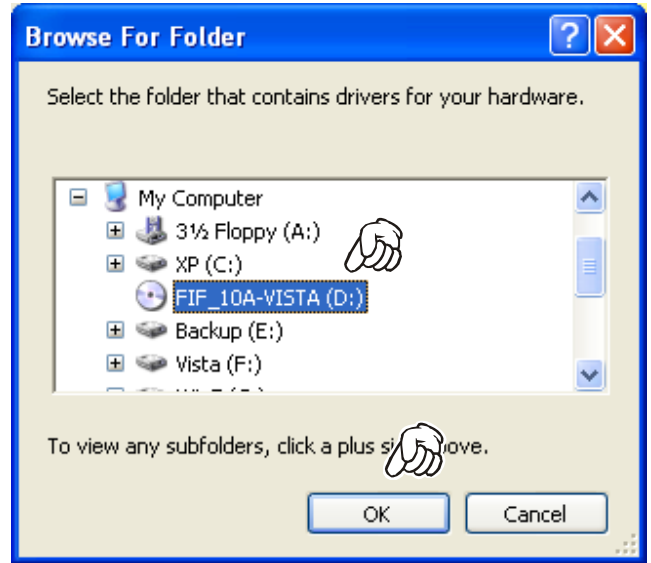

1. Set the supplied CD into your CD-ROM drive.
2. When FIF-10/A is connected to the USB port on the computer, the following window (Hardware Update Wizard) will be open. Select “**Install from a list or specific location (Advanced)**,” then click the *left* mouse button on the “**Next >**” button.

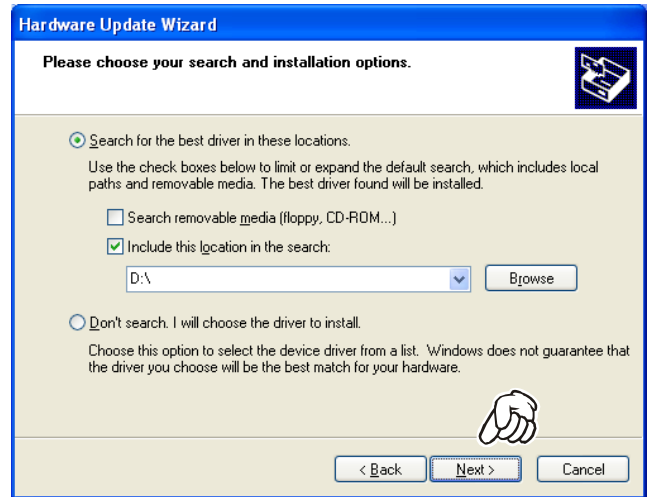

3. Select “**Include the location in the search:**” then click the *left* mouse button on the “**Browse**” button.

4. Click the CD-ROM Drive, then click the *left* mouse button on the “**OK**” button.

5. Click the *left* mouse button on the “**Next >**” button, then starting the driver install.

INSTALLATION PROCEDURE FOR THE FIF-10A DRIVER (Microsoft® Windows® XP)

6. Click the *left* mouse button on the “Continue Anyway” button.

7. Click the left mouse button on the “Finish” button.

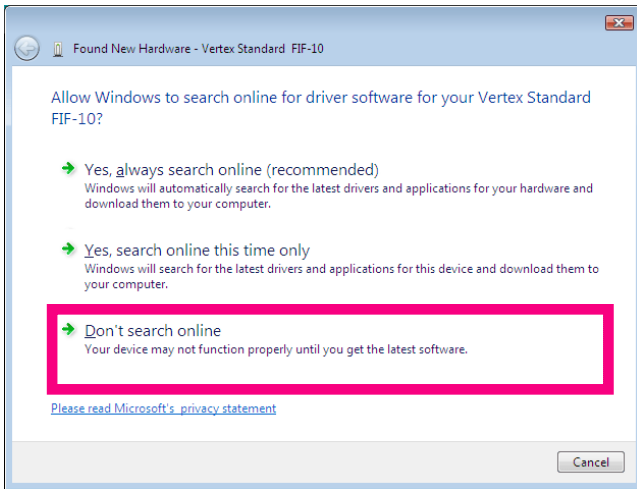

INSTALLATION PROCEDURE FOR THE FIF-10A DRIVER (Microsoft® Windows® Vista)

Note: Please perform this operation after changing user account to an “Administrator”.

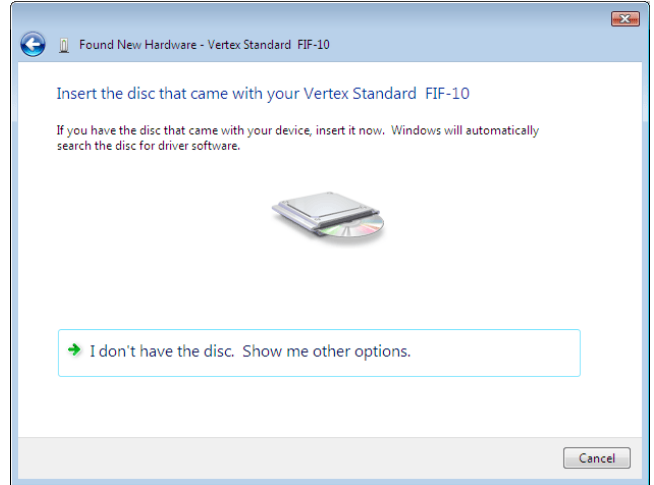

1. When **FIF-10/A** is connected to the USB port on the computer, the following window (automatic device recognition window) will be open. Click the *left mouse button* on “**Locate and install driver software (recommended)**”.
2. The screen becomes dark, and the “User Account Control” window will be open. Click the *left mouse button* on “**Continue**” button.

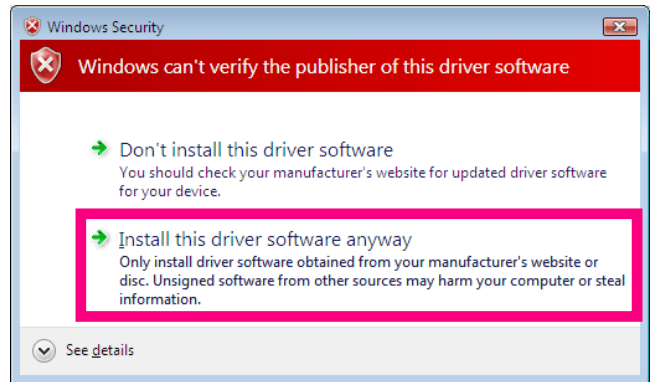

3. The following window will be open. Click the *left mouse button* on “**Don't search online**”.

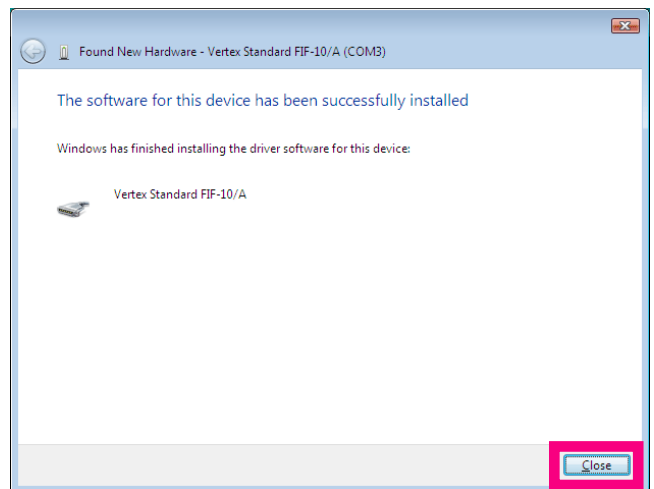

4. The following window will be open. Insert the FIF-10A CD-ROM into your computer.

5. The “Windows Security” window will be open. Click the *left mouse button* on “**Install this driver software anyway**”.

6. The following window will be open. The driver installation is complete. Click the *left mouse button* on “**Close**” button.

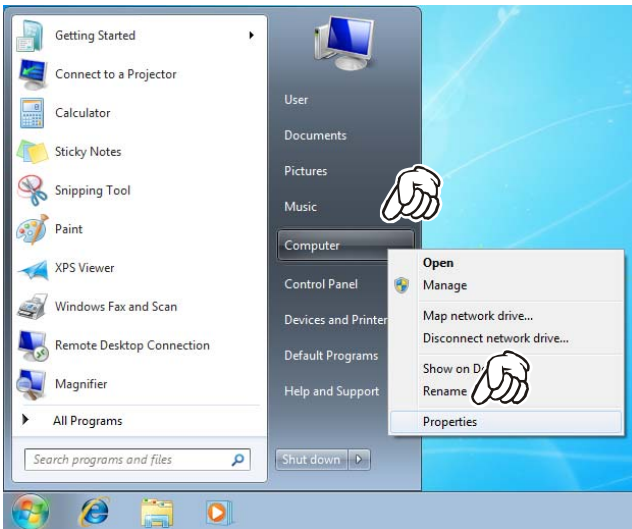

INSTALLATION PROCEDURE FOR THE FIF-10A DRIVER (Microsoft® Windows® 7)

Note: Please perform this operation after changing user account to an “Administrator”.

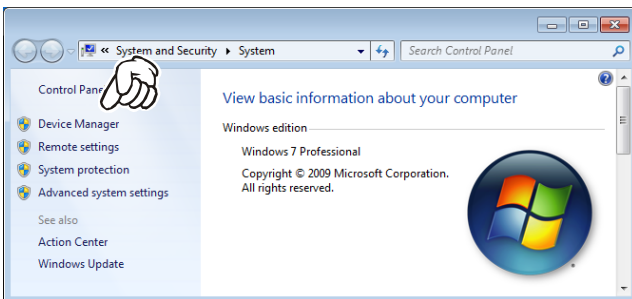

1. Set the supplied CD into your CD-ROM drive.
2. When **FIF-10/A** is connected to the USB port on the computer, the following window will be open. Click the *left mouse button* on “x”.

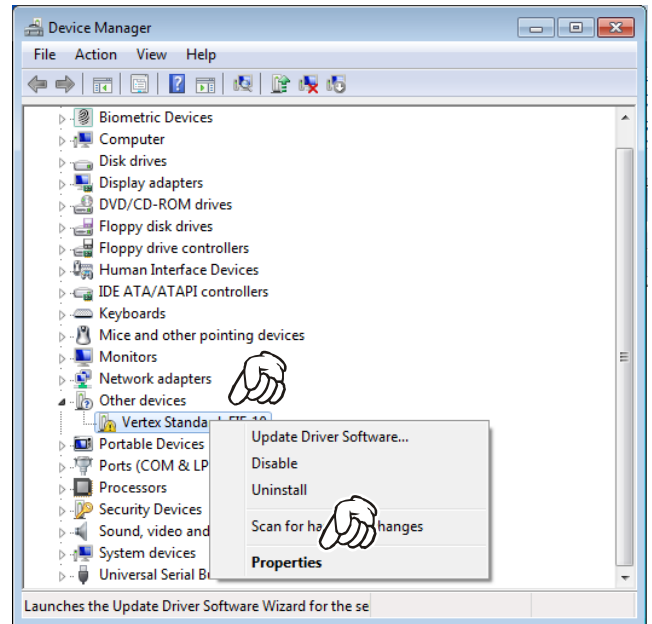

3. Click the *right mouse button* on the “**Computer**” Item, then click the *left mouse button* on “**Properties**” to open the “**System Properties**” window.

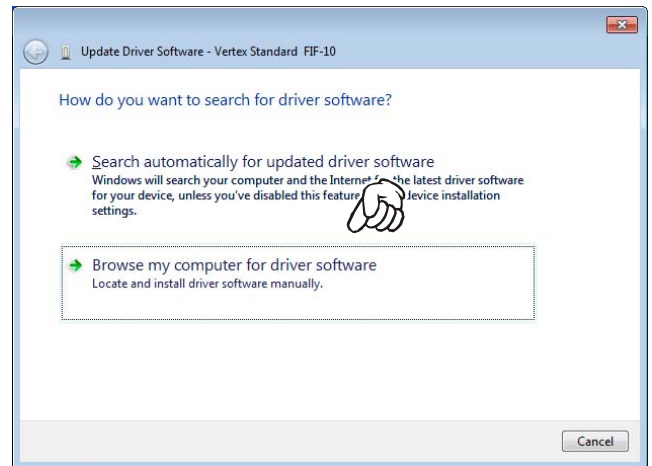

4. Click the *left mouse button* on the “**Device Manager**” Item, to open the “**Device Manager**” window.

5. Click the *right mouse button* on the “**Vertex Standard FIF-10**” Item, then click the *right mouse button* on “**Properties**”.

6. The following window will be open. Click the *left mouse button* on “**Browse my computer for driver software**”.

INSTALLATION PROCEDURE FOR THE FIF-10A DRIVER (Microsoft® Windows® 7)

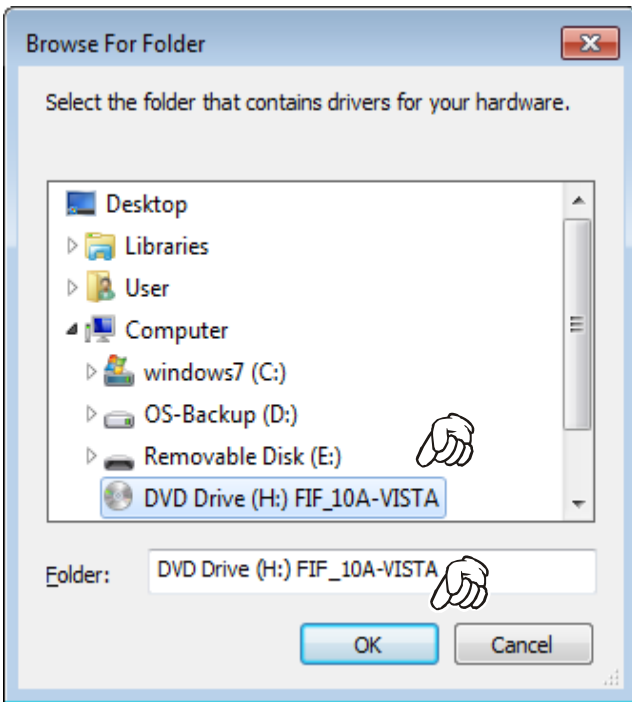

7. The following window will be open. Click the *left* mouse button on the “Browse...” button.

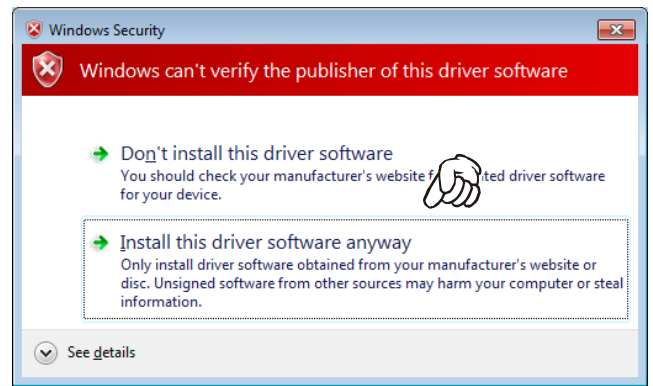

9. Click the *left* mouse button on the “Next >” button, to start the driver install.

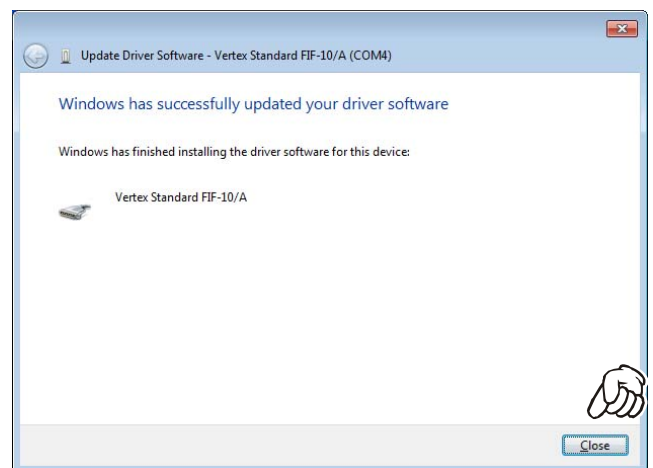

8. Click the CD-ROM Drive, then Click the *left* mouse button on the “OK” button.

10. The “Windows Security” window will be open. Click the *left* mouse button on “Install this driver software anyway”.

11. The following window will be open. The driver installation is complete. Click the *left* mouse button on “Close” button.

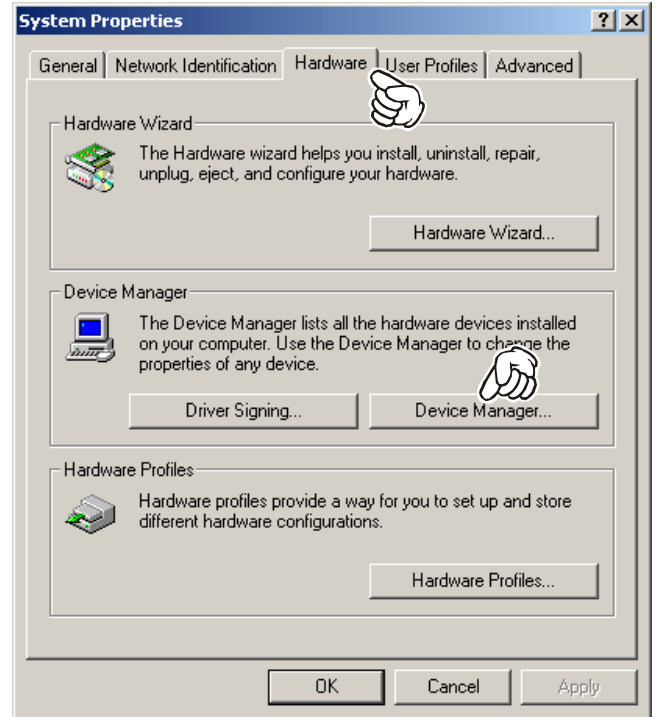

CONFIRMING THE COMPUTER'S COMMUNICATION PORT (Microsoft® Windows® 2000)

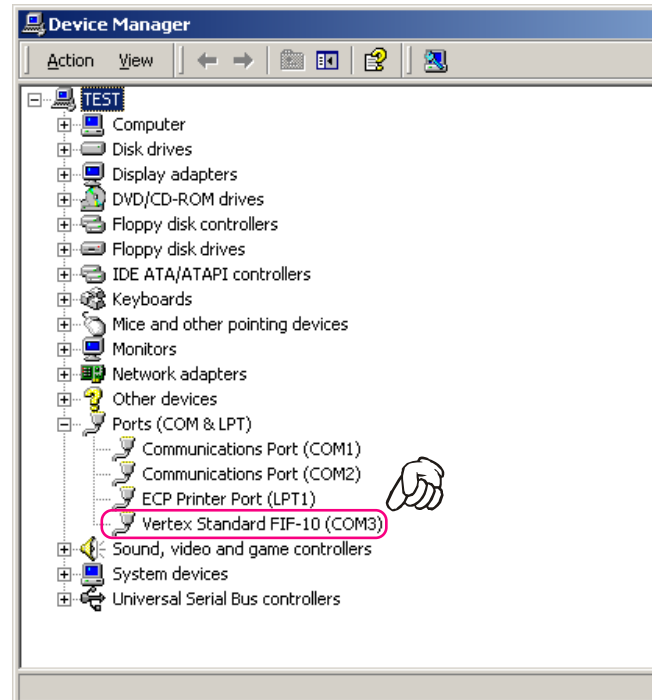

1. Click the *right* mouse button on the “My Computer” icon on the desktop, then click the left mouse button on the “Properties” item to open the “System Properties” window.

2. Click the *left* mouse button on the “Hardware” Folder, then click the *left* mouse button on the “Device Manager” Button to open the “Device Manager” window.

3. Confirm the computer's communication port which detects the FIF-10A.

CONFIRMING THE COMPUTER'S COMMUNICATION PORT (Microsoft® Windows® XP)

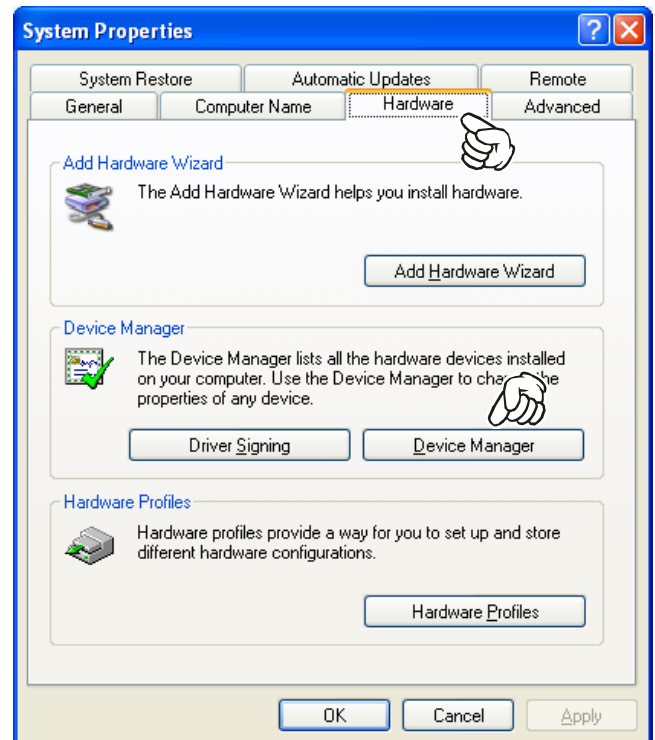

1. Click the *left* mouse button on the “start” button, then click the *left* mouse button on the “My Computer” Item.

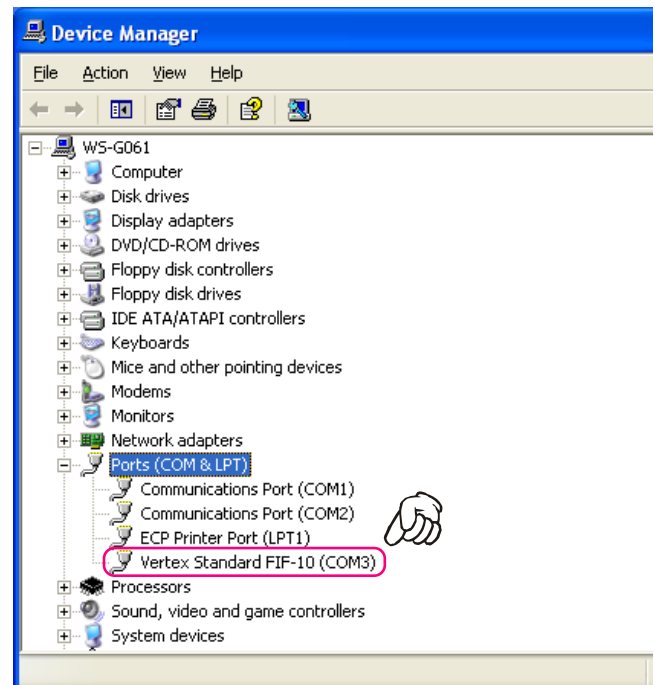

2. Click the *left* mouse button on “View system information” to open the “System Properties” window.

3. Click the *left* mouse button on the “Hardware” Folder, then click the *left* mouse button on the “Device Manager” button to open the “Device Manager” window.

4. Confirm the computer's communication port which detects the FIF-10A.

CONFIRMING THE COMPUTER'S COMMUNICATION PORT (Microsoft® Windows® Vista)

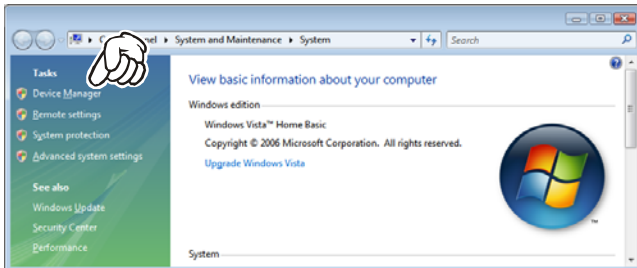

1. Click the *left* mouse button on the “start” button, then click the *right* mouse button on the “Computer” Item.

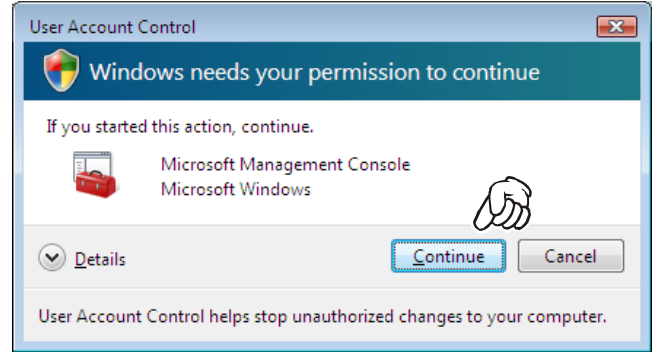

2. Click the *left* mouse button on “Propeties” to open the “System Properties” window.

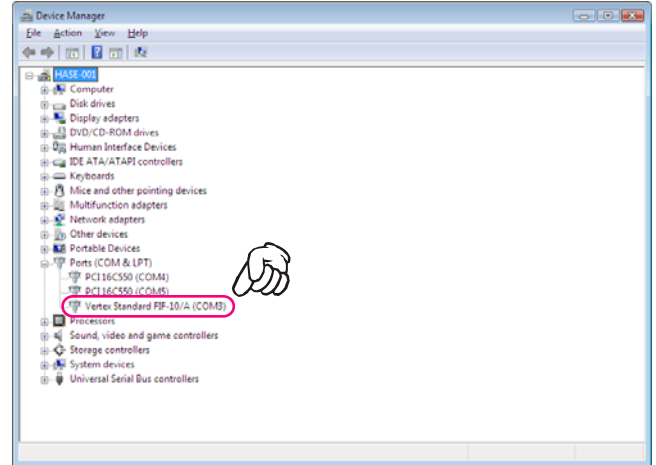

3. Click the *left* mouse button on the “Device Manager” Item, to open the “Confirmation” window.

4. Click the *left* mouse button on the “Continue” button to open the “Device Manager” window.

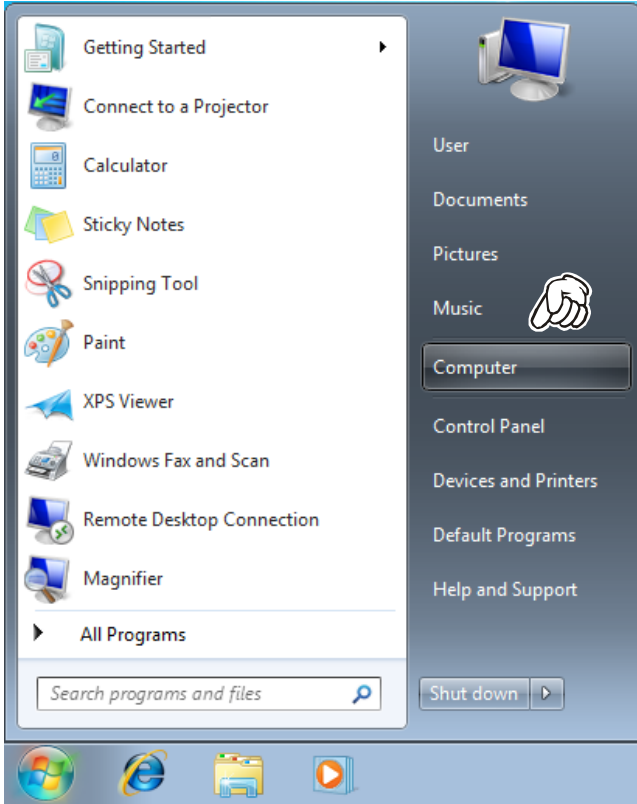

5. Confirm the computer's communication port which detects the FIF-10A.

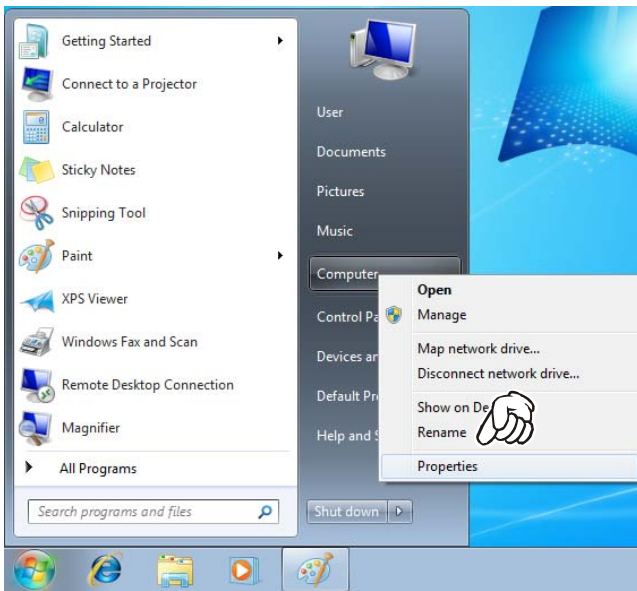

CONFIRMING THE COMPUTER'S COMMUNICATION PORT (Microsoft® Windows® 7)

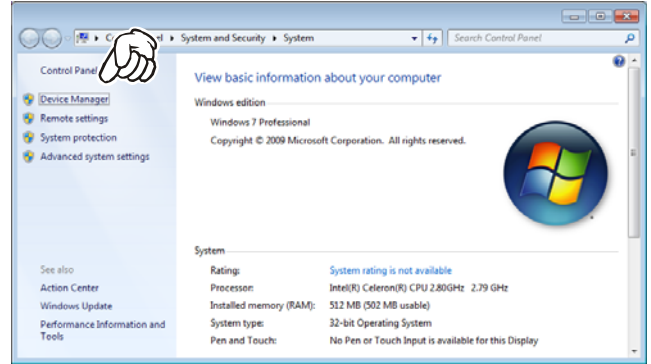

1. Click the *left* mouse button on the “start” button, then click the *right* mouse button on the “Computer” Item.

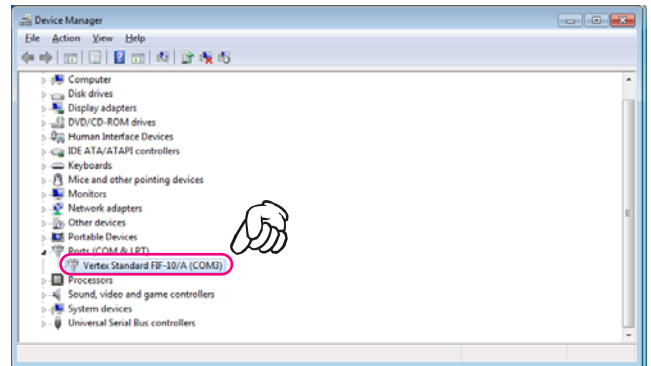

2. Click the *left* mouse button on “Properties” to open the “System Properties” window.

3. Click the *left* mouse button on the “Device Manager” Item, to open the “Device Manager” window.

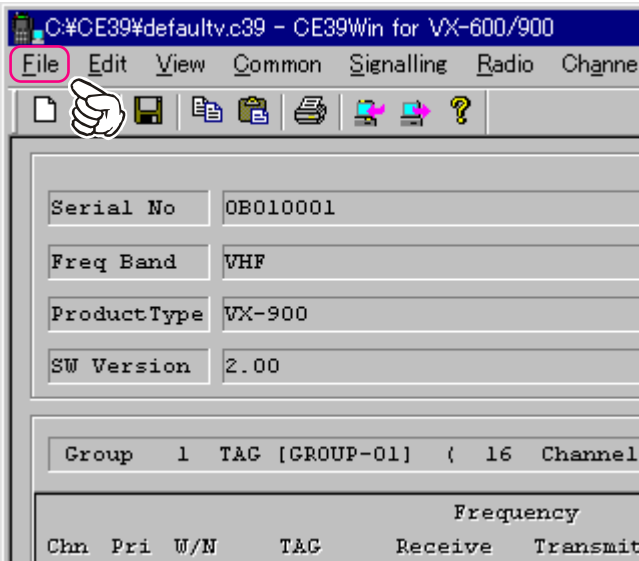

4. Confirm the computer's communication port which detects the FIF-10A.

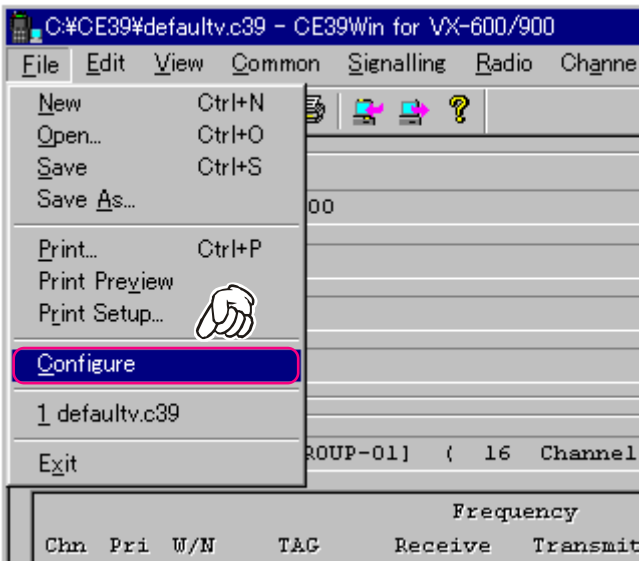

“CONFIGURE” PARAMETER SETTING PROCEDURE (EXAMPLE: “CE39”)

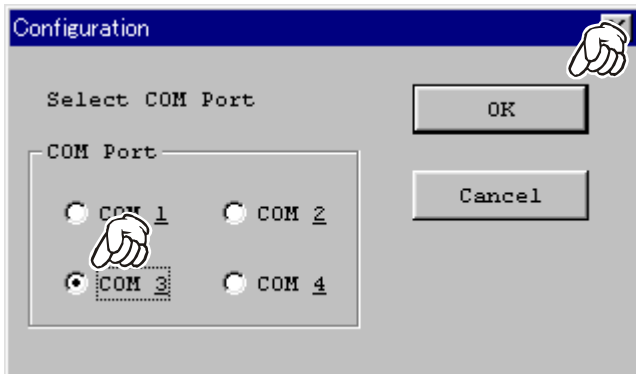

1. Click the *left* mouse button on the “File” parameter.

2. Click the *left* mouse button on the “Configure” item to open the “Configure” window.

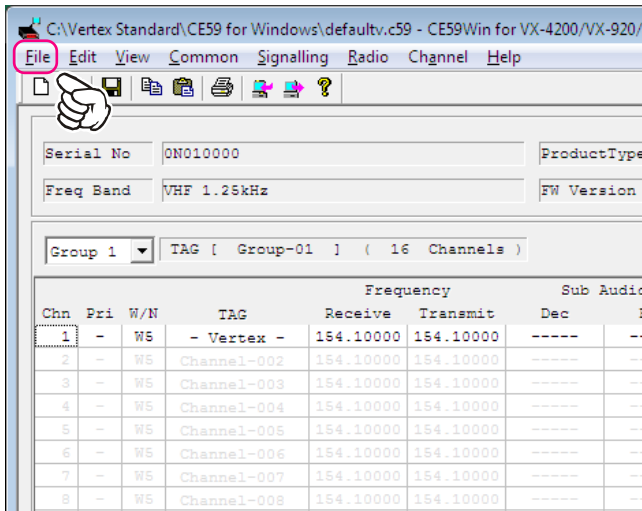

3. Select the communication port which is detecting the FIF-10A, then click the *left* mouse button on the “OK” button.

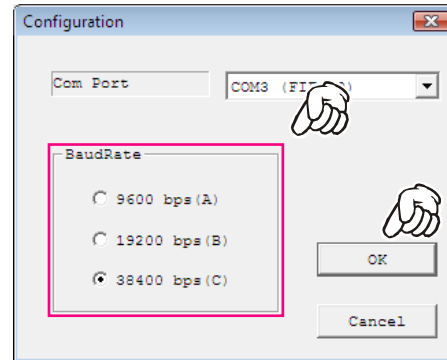

“CONFIGURE” PARAMETER SETTING PROCEDURE (EXAMPLE: “CE59”)

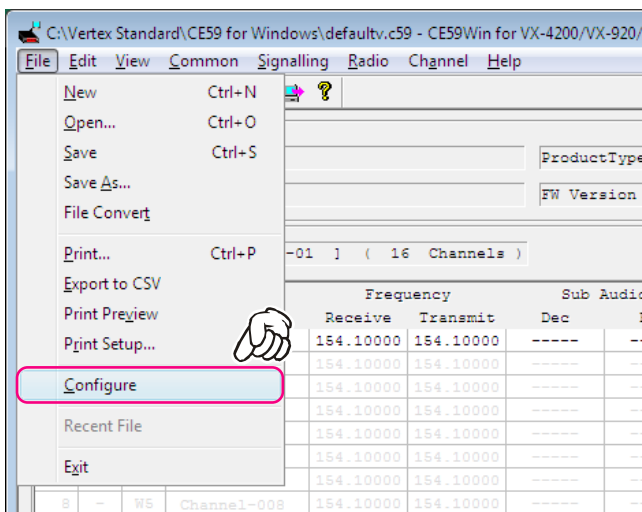

1. Click the *left* mouse button on the “File” parameter.

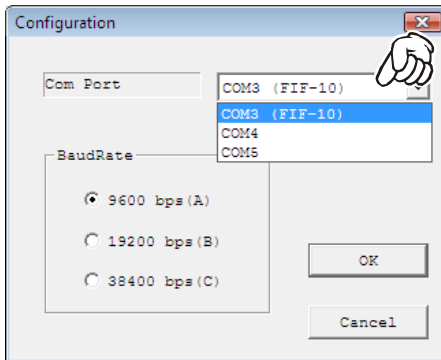

4. Select the Baud Rate for the transceiver’s computer interface circuitry, then click the *left* mouse button on the “OK” button.

2. Click the *left* mouse button on the “Configure” item to open the “Configure” window.

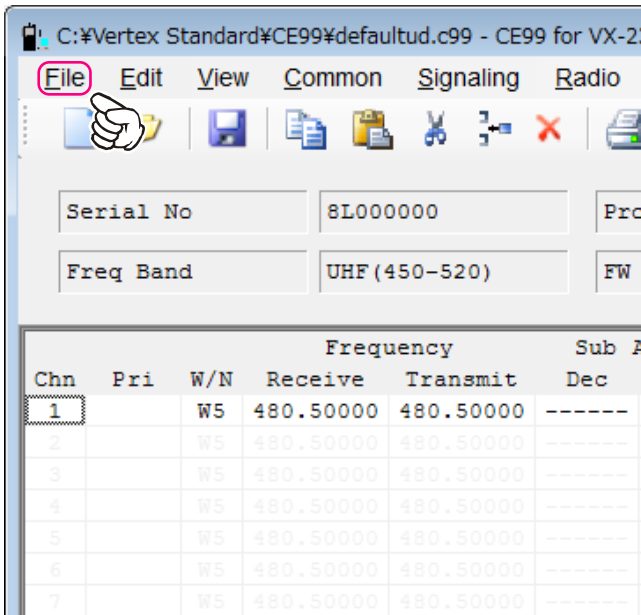

3. Select the communication port which is detecting the FIF-10A.

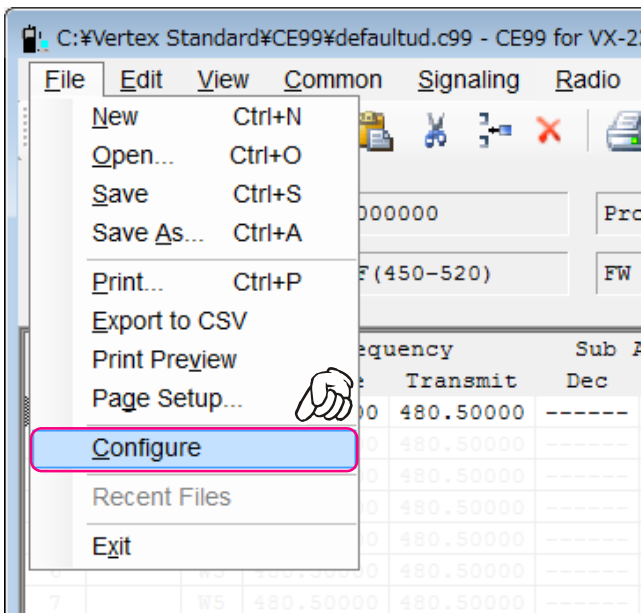

“CONFIGURE” PARAMETER SETTING PROCEDURE (EXAMPLE: “CE99”)

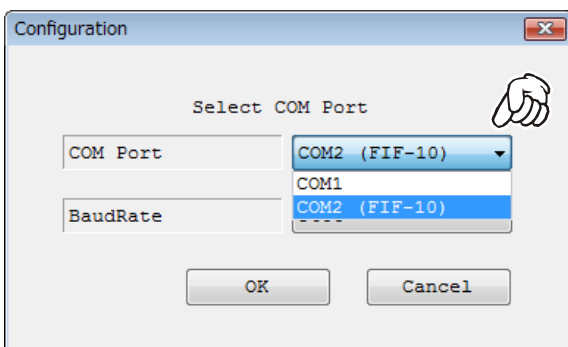

1. Click the *left* mouse button on the “File” parameter.

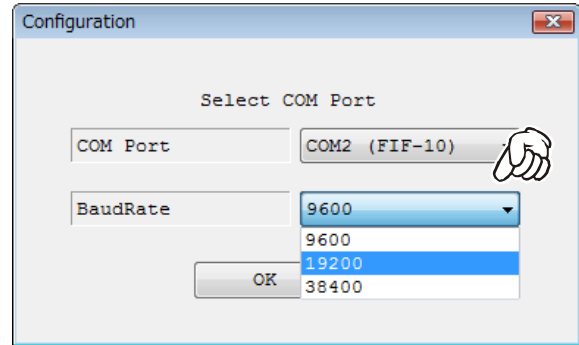

2. Click the *left* mouse button on the “Configure” item to open the “Configure” window.

3. Select the communication port which is detecting the FIF-10A.

4. Select the Baud Rate for the transceiver’s computer interface circuitry.

5. Click the *left* mouse button on the “OK” button.
